

NUR 455: Pathophysiological Bases of Nursing Practice for RNs

A study of the pathophysiology of selected disease processes that builds on the nurse's knowledge of life sciences and clinical manifestations and care. Addresses pathophysiological changes at the cellular, organ, system, and multi-system levels. Emphasizes the physiological rationale for nursing interventions specific to the disease processes studied. Includes implications for health across the health-illness continuum and the lifespan.

Credits: Credits 3

Prerequisites:

Prerequisites

RN license and admission to the RN-to-BSN Completion track

Semester Offered:

Semester Offered

Offered fall semester trimester, sub-term 2.
